Peer Evaluation Consensus Statement

Project: CMUMC

Team: CVS (Vita Chen, Siyang Li)

Contributions:
- Vita:
    - Front-end UI and UX design
    - Front-end development: Majority of Ajax events
    - Front-end API: Google Map API, JQuery Bar Rating API
    - Half unit testing (views and half model)
- Siyang:
    - Model and Form design
    - Back-end development: Majority of the views
    - Back-end API: Twilio Messaging API, Google Map Geocoding API
    - Half unit testing (form and half model)

Other notes:
- Both of us contributed equally to the generation and development of project idea, and we wrote our project proposal together. We also took turns writing the sprint backlog and presentation slides.
- We set reasonable expectations for each sprint and we were able to complete most of them. We added and removed some functions due to usability, however, most of planned functions have been successfully implemented. We communicated well and set our internal deadlines. We met the deadlines and also our expectations.
- We had different perspectives on the design of UI or functionality in the process, but we solved the conflict by discussing and communication. We also conducted several usability testing together, got feedback from end-users and improved the usability of our web application.
- We accurately communicated our skills and availability, so each of us could focus on parts we are strong at and also learn from each other.
    - Vita is primarily responsible for the front-end and Ajax.
    - Siyang is mainly for the back-end and incorporate external APIs.
    - Vita is really busy with classes and Siyang is packed with job interviews this semester, but we planned early and communicated throughout the project so fortunately we had little issues with coordination and time conflict.
- We think each of us complete a fair amount of work (50%) in the project.
